Education

University of California, Davis

Bachelor of Science in Computer Science

Davis, CA

Expected May 2026

Solano Community College

Associates in Computer Science | GPA: 3.79 | President's Honors | Dean's Honors

The Eleanore and John Zeltin Scholarship (Cumulative GPA 3.85)

Margaret L. Choy Memorial, SCCSFF Award (Cumulative GPA 3.79)

Fairfield, CA

Aug 2021 – May 2024

Relevant Courses: Data structures and algorithms (Java, C++), Discrete Math and Probability, Assembly programming language

Projects Experience

Task Management API Platform | [GitHub](#)

August 2024 – September 2024

- Developed a scalable API platform using **Node.js** and **Express** for task management, enabling seamless task creation, tracking, and updates via **Postman**
- Designed **MongoDB** schemas with **Mongoose** to handle key task attributes (due date, title, description, status), incorporating strong indexing and validation for optimized performance. Reduced task retrieval time by 10% through data modeling and query optimization, facilitating complex filtering and sorting.
- Executed thorough endpoint testing with **Postman**, creating both manual and automated test scripts to ensure high system reliability. Enhanced system stability, reducing production issues by 15%.

E-Commerce Platform Development | [GitHub](#)

May 2024 – July 2024

- Designed and implemented a full-featured e-commerce platform, significantly increasing customer engagement and improving sales conversion rates.
- Engineered scalable backend systems using **Express.js** and **Node.js**, creating REST APIs for efficient client-server communication, resulting in a 10% improvement in response times
- Integrated **Socket.IO** for real-time communication features, enabling live updates and instant messaging, boosting user engagement and increasing active sessions by 15%.
- Leveraged **Cloudinary** for media asset management, utilizing dynamic transformations and automatic image optimization, reducing load times by 18% and enhancing user experience.

Music Streaming Web Service | [GitHub](#)

July 2024 – August 2024

- Developed a comprehensive music streaming web service, allowing users to search and listen to songs and albums.
- Built the backend using **Node.js** and **Express.js**, with music data stored in **MongoDB** and media assets managed via **Cloudinary Cloud Storage**. This setup optimized image loading, reducing load times by 21% and enhancing the overall user experience.
- Implemented server-side technology to facilitate smooth client-server interactions, improving database access patterns and query efficiency, leading to a 19% increase in server response times and a 15% improvement in data retrieval.

Work Experience

Amazon Warehouse Worker – Problem Solver

August 2021 – October 2022

- Resolved inventory discrepancies using Microsoft Excel, ensuring accurate tracking and placement of items within the warehouse, which contributed to a 15% reduction in misplaced inventory.
- Collaborated with cross-functional teams to troubleshoot operational issues, enhancing order accuracy and resolving fulfillment errors, resulting in a decrease in shipping delays by 12%.

Technical Skills

Languages: Java, Python, C/C++, JavaScript, HTML/CSS

Frameworks: Node.js, REST API, Express.js, Bootstrap 5, Socket.IO

Developer Tools: Git/GitHub, VS Code, Visual Studio, IntelliJ, Cloudinary Cloud Storage, Vercel, Render

Databases: MongoDB, MySQL, SQL (Postgres),
